In-class practice #5： Before 21:30

Please use UDP Socket to implement UDP Echo Server/Client to achieve the following check points:

- Check point 1: (50%)
  - Complete the echo function.
- Check point 2: (30%)
  - Show each client's IP and port number on the screen at server side.
  - Show client's IP and port on the screen at client side.
- Check point 3: (20%)
  - Use "tcpdump" to catch packets and show UDP packets.
    "sudo tcpdump –i lo0"
